DETAILED ACTION

Response to Amendment

1. This Office Action is in response to Applicant's Amendment dated November 8, 2006 in response to USPTO Final Office Action dated August 18, 2006.

The amendment to claim 1 is sufficient to place the application in a condition for allowance as set forth hereinbelow.

Allowable Subject Matter

2. Claims 1-11 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Relative to claim 1, the major difference between teachings of the prior art of record (Yuyama et al. (USP 5,612,732); Soltesz et al. (USP 5,756,978); Slaughter, III et al. (USP 5,598,536) and Landis et al. (USP 5,588,148)), and that of the instant invention is that said prior art of record **does not teach** a camera comprising a storage device for storing owner identification information and user identification information; an information reader for reading identification information from an external storage medium, the read identification information being different from the owner identification information and set as the user identification information; a communicating device for communicating with a server through a network, the server being designated in accordance with the identification information last read. Relative to claim 2, the major difference between teachings of the said prior art of record

Art Unit: 2629

and that of the instant invention is that said prior art of record **does not teach** a camera comprising a communicational condition evaluating device for determining whether condition of the communication of the communicating device with the served is satisfactory; and a communication postponing device for, if the communicational condition evaluating device determines that the condition is unsatisfactory, postponing the communication of the communicating device with the server until the communicational condition evaluating device determines that the condition becomes satisfactory.

Relative to claim 4, the major difference between teachings of the said prior art of record and that of the instant invention is that said prior art of record **does not teach** the said camera comprising a camera communicating device for communicating with at least one additional cameras reading the same identification information that the camera reads; and a cooperative mode designating device for designating the camera in either of a master mode and a slave mode with respect to the additional cameras; wherein the camera supervises the additional camera through the camera communicating device when the camera is in the master mode; when the camera is supervised by one of the additional cameras through the camera communicating device when the camera is in the slave mode, the one of the additional cameras being designated in the master mode by the cooperative mode designating device thereof.

Relative to claim 5, the major difference between teachings of the said prior art of record and that of the instant invention is that said prior art of record **does not teach** a camera comprising an identification information storage device for storing identification information of a plurality of persons read by the information reader; and a communication controller for controlling the communicating device and the data transmitter such that the communicating device

Art Unit: 2629

communicates with the server designated in accordance with the read identification information of each of the persons and the data transmitter transmits the image data to the designated server.

Relative to claim 8, the major difference between teachings of the said prior art of record and that of the instant invention is that said prior art of record **does not teach** a camera comprising a user's identification information setting device for setting the owner's identification information as user's identification information if the information reader reads no identification information and setting the identification information read by the information reader as the user's identification information if the information reader reads the identification information; and a communicating device for communicating with a server through a network, the server being designated in accordance with the user's identification information.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Applicant's Remarks

4. Applicant's remarks relative to claims 1 and 3 are rendered moot in light of the allowance of said independent claims 1.

Art Unit: 2629

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
